

28-я международная выставка продуктов питания, напитков и сырья для их производства

12.04.2021 – 16.04.2021

Pectinworld and Pectin Terra were established with the aim of providing a platform for “Open Access” to the information pertaining to the pectin, dietary fibres, other fields of the science, technology, industry and for production of pectins, dietary fibres. These companies amalgamate specialists, scientists, the group of professors from Spain and Russia universities, technical directors of companies involved in the development of projects. they companies play an instrumental role in expanding the reach of research, industry data in the real time, which in turn allows to combine both scientific and industry experiences.

ПРОДЭКСПО-2021

PECTINWORLD PECTINTERRA

Research results show that pectin hydrogels can be used as biomaterials for cell delivery in regenerative medicine, etc. Modified pectins and nanopectins can be obtained from agricultural raw materials or from industrial pectin. According to our results samples of chitosan, pectin, and modified pectin are demonstrated a significant induction of cell differentiation during experiments related to the study of cancer.

These companies offer the following pectins, dietary fibres and modified pectins.
